Short Country Report - Evaluation

Country: **Nicaragua**

- All the required information included & charts → 25.5 / **27**
- Quality of the analysis (information analysed consistently, clearly and precisely) → 12.0 / **23**
- Sources → 2.0 / **5**
- Presentation / Writing → 2.00 / **5**

Malus:

- Failure to respect instructions (length, size, font, etc.) → -0.00

→ TOTAL POINTS: 41.5 / **60**

→ COMMENTS:

Interesting analysis. However, your analysis is purely descriptive. The purpose of this report would be to understand the causes and implications of certain developments and policies.
1a: Descriptive analysis. What are the drivers of economic growth? Which sectors mainly contributed to growth? What policies were in place?
1b: Descriptive analysis. What were the drivers of unemployment? Can you distinguish between male and female labor market participation? Can you say anything about youth unemployment?
1c: Descriptive analysis. What are the drivers of inflation? How is inflation related to monetary policy interventions?
1d: Descriptive analysis. What are the drivers of the evolution of public debt? Can you say anything about internal and external debt?
1e: Descriptive analysis. Provide some background information.
1f: Good analysis combined with analysis in part 2.
2a: Descriptive analysis. Is Nicaragua a net borrower or lender? What happened between 2017 and 2020?
2b: Mostly descriptive analysis. Attributing rising oil prices to the trade deficit, however, is a good example how you should proceed in your analysis throughout this report.
2c: Descriptive analysis.
2d: Descriptive analysis.
3a: Analysis: Descriptive. Can you link it to economic performance or monetary policy?
Graph: What is the unit of NEER/REER?
4: Graph: Display the difference in inflation between the two countries instead of the two inflation series. What are the units of the exchange rate and inflation? Label the axes.
5: Missing conclusion. The conclusion should wrap up your report and identify potentials and risk of a country.
Sources: No sources in the text even if you are not just describing the series.
Presentation: The structure of the report is ok, but you could improve your plots and your language.
Bibliography: It is not enough to link the IMF data portal. We should be able to easily recover which data you used, which is not possible this way.

Introduction + Conclusion

Economics history.
